

Electricity Bill Calculator

Input: no of units

Process:

- if units $\leq 100 \rightarrow ₹2/\text{unit}$
- 101-200 $\rightarrow ₹4/\text{unit}$
- 201-300 $\rightarrow ₹6/\text{unit}$
- $> 300 \rightarrow ₹8/\text{unit}$

Output: Total electricity bill amount

Algorithm

Step 1: start

Step 2: take no of units as input

Step 3: if units ≤ 100 , calculate Bill at ₹2/unit.

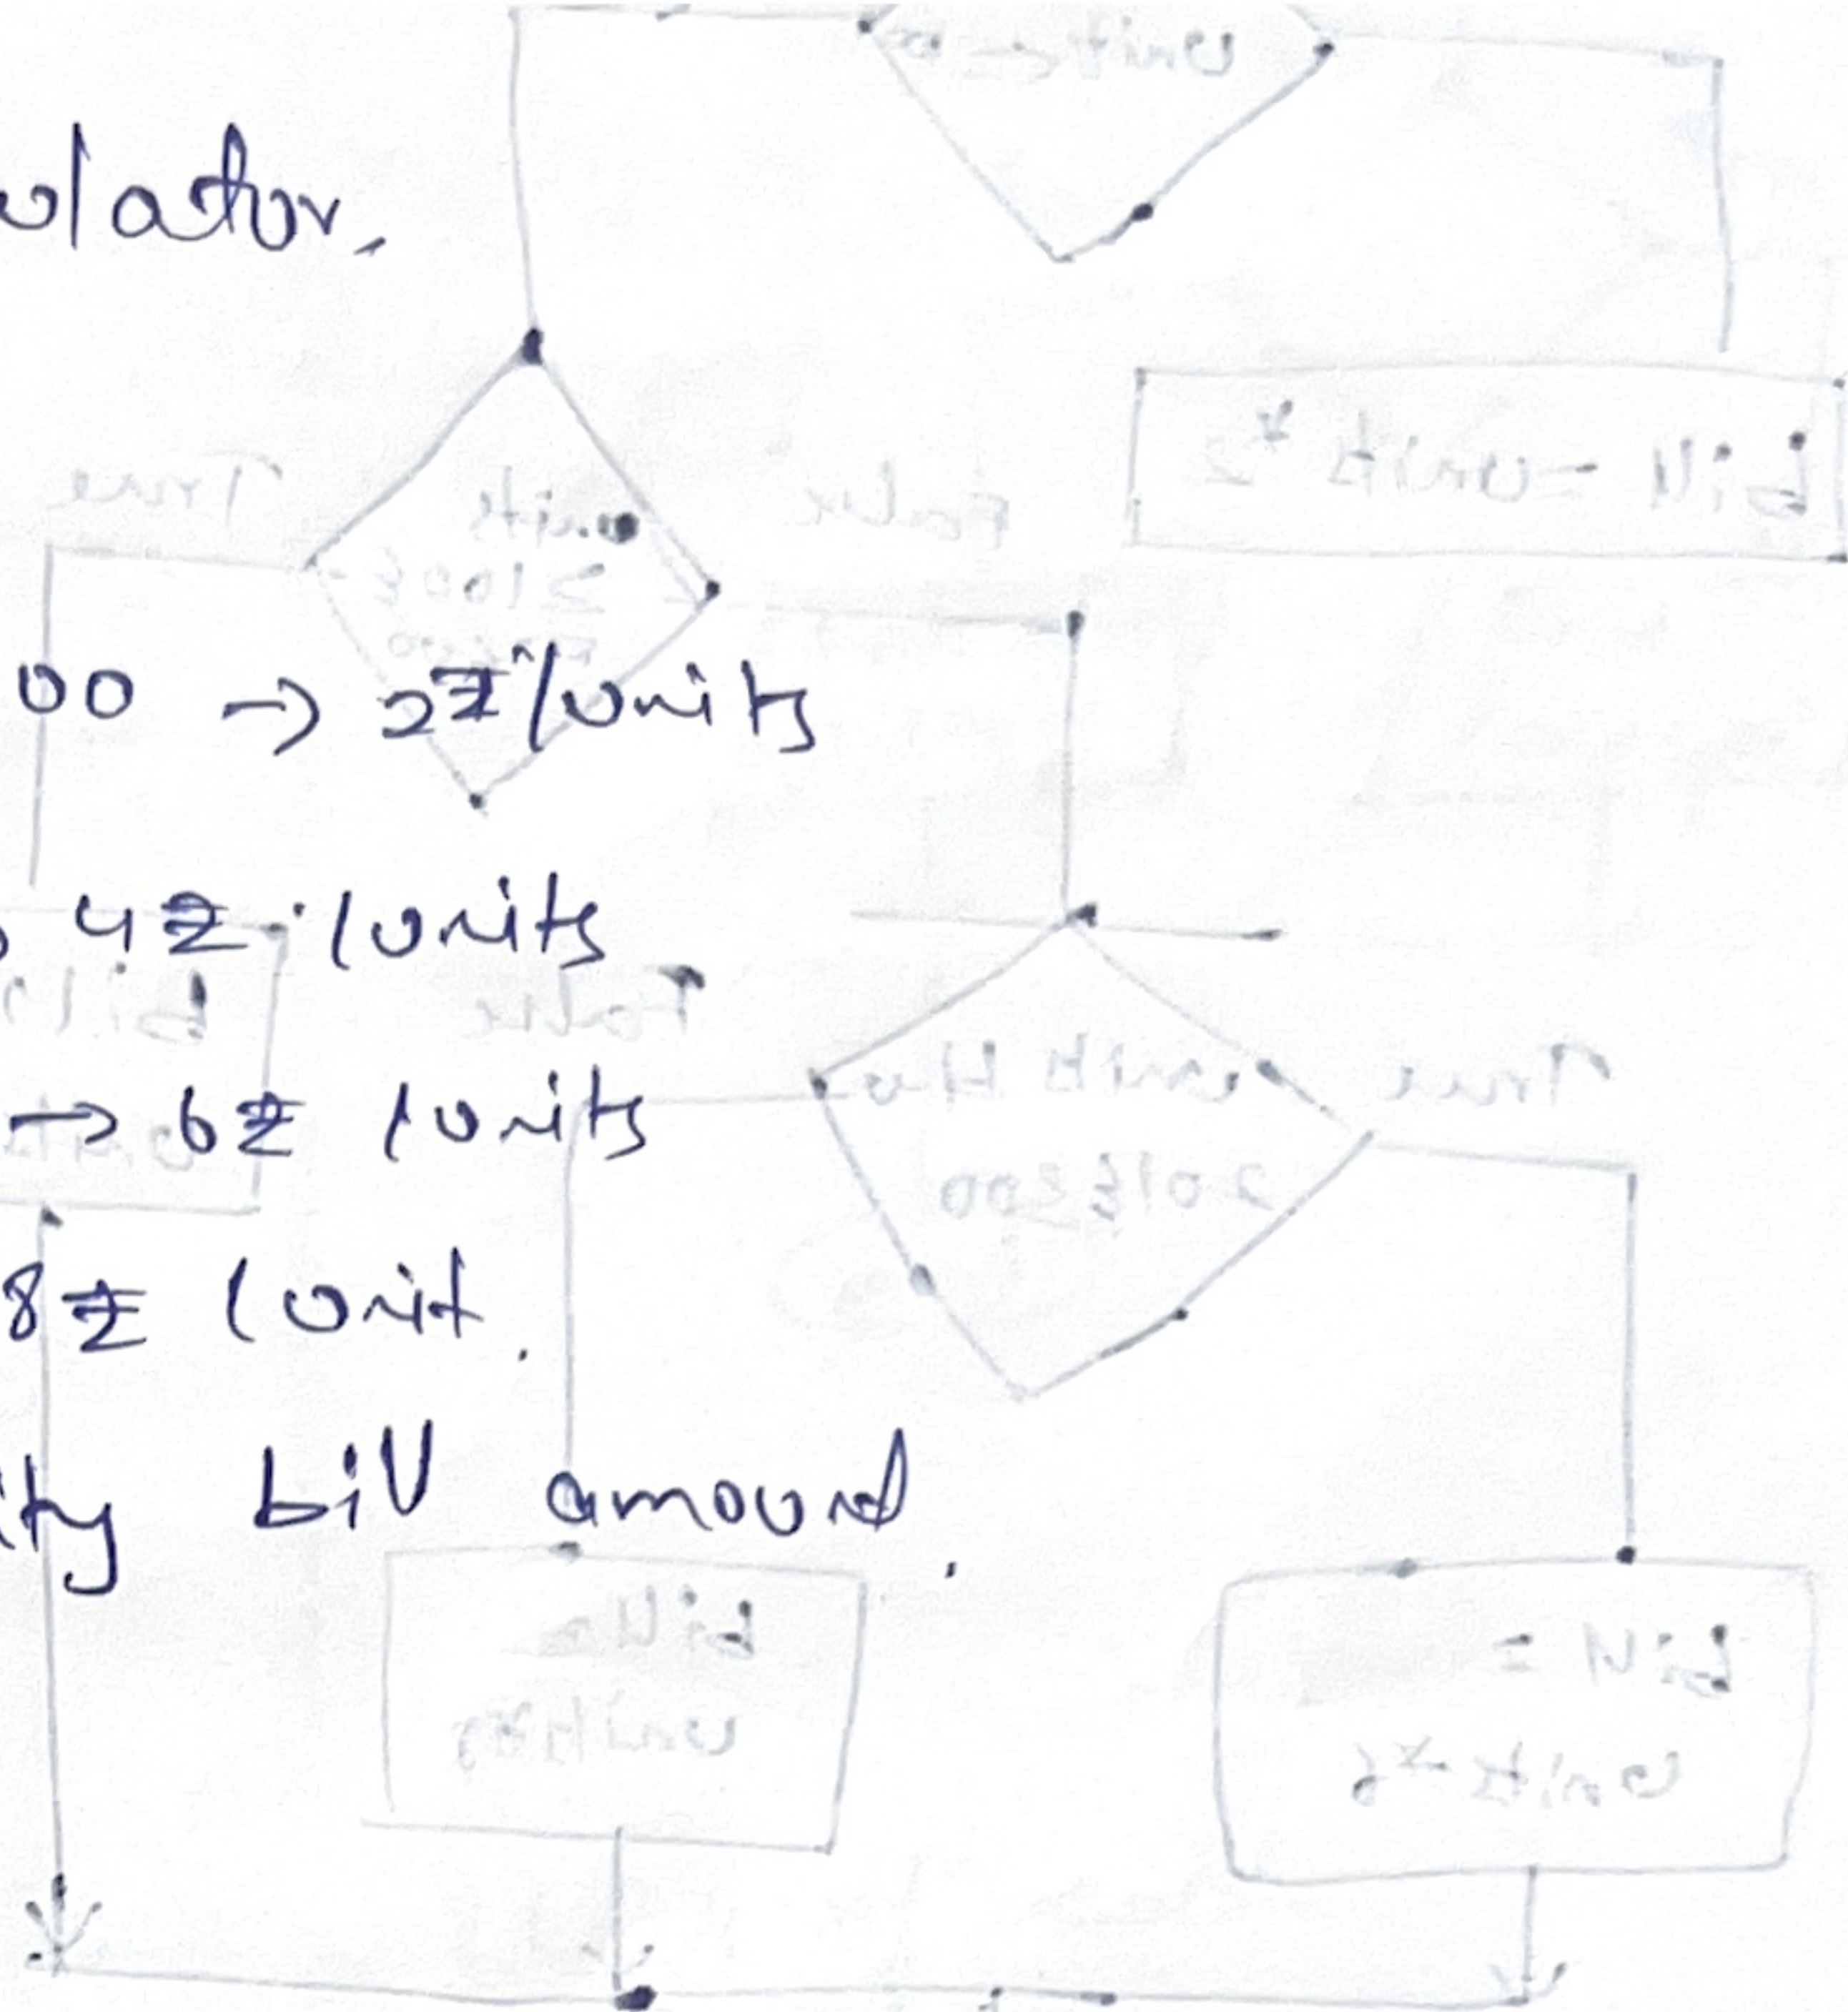

Step 4: else if $101 \leq 200 \rightarrow ₹4/\text{unit}$

Step 5: else if $201 \leq 300 \rightarrow ₹6/\text{unit}$

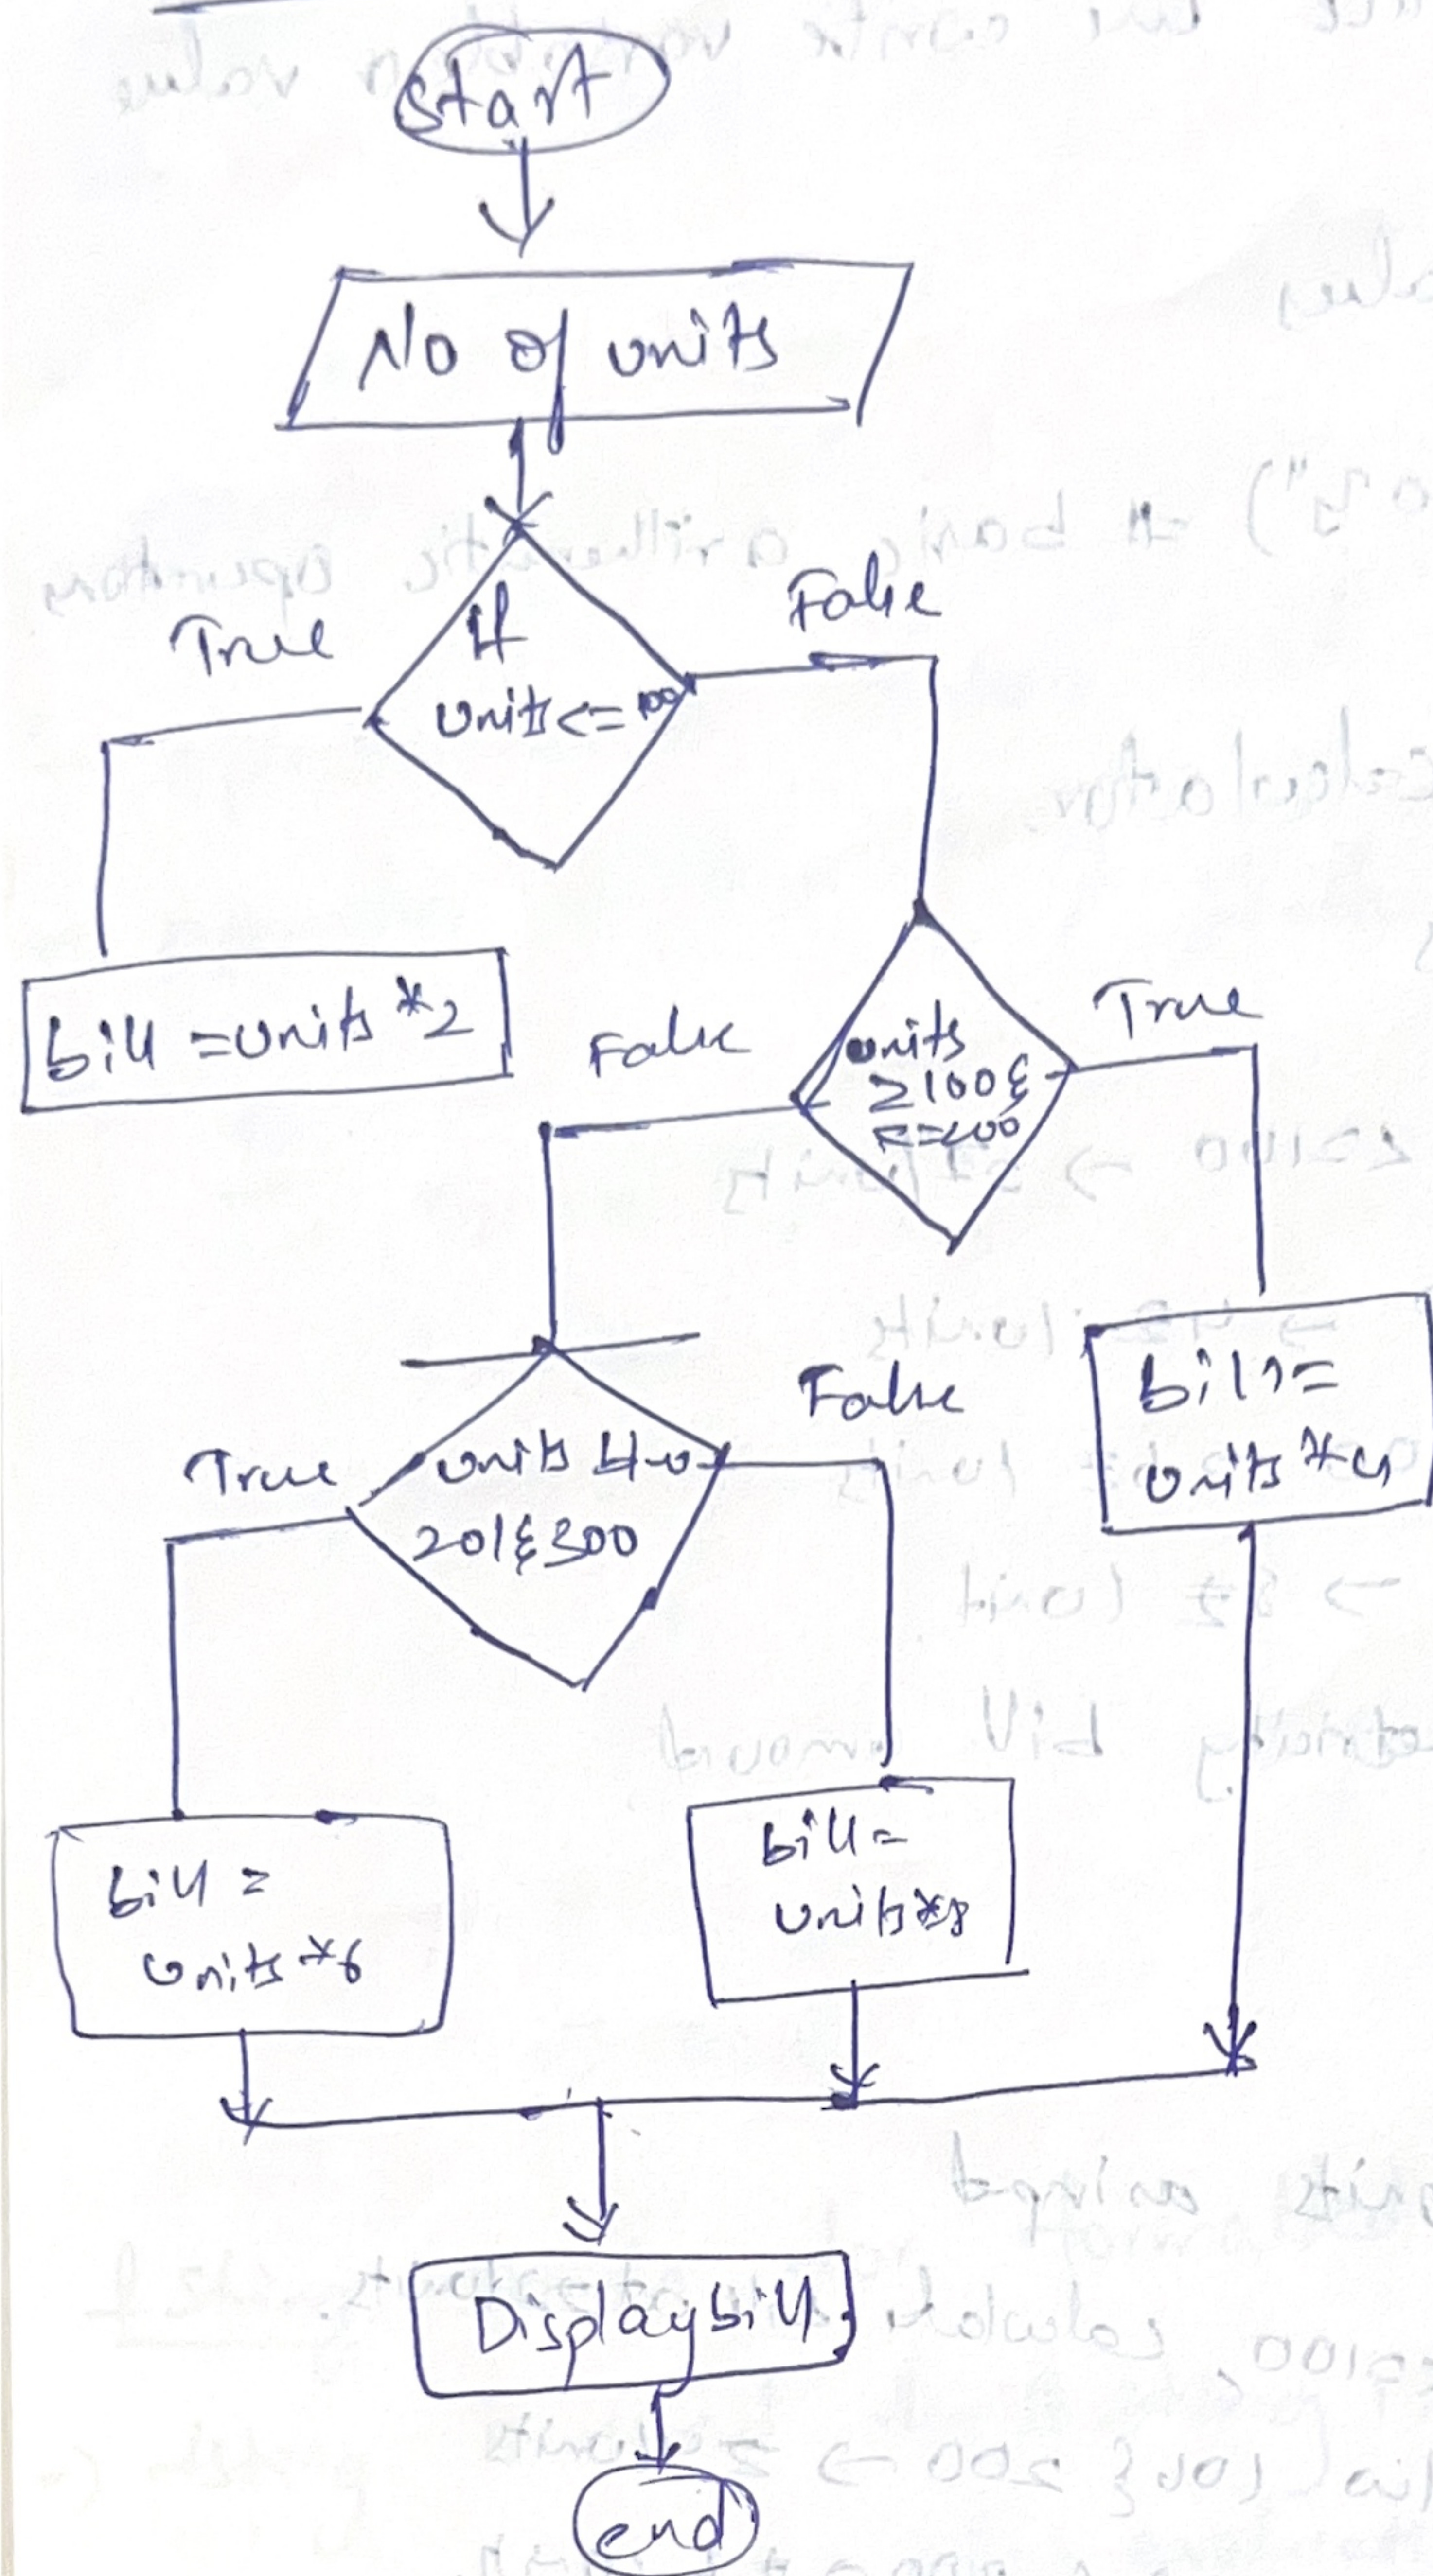

Step 6: else (> 300) $\rightarrow ₹8/\text{unit}$

Step 7: Display total Bill

Step 8: end

flow chart

leap year

input: year

Process: #logic year % 400 == 0
or

year % 4 == 0 and year % 100 != 0

output: leap year or not.

Algorithm

1. Start
2. Take year as input
3. if year divisible by 400 ~~display~~ display leap year.
4. otherwise, if year divisible by 4 & not divisible by 100
5. if yes, display leapyer
6. otherwise, display "not a leap year".
7. end.
